

**Welcome to E-Pantry, the self-service smart fridge solution that provides customers with hot & cold food and beverages, 24 hours a day.**

A flexible and easy-to-use system, E-Pantry has been created as an ideal solution for all manner of businesses and organisations, including universities, workplace spaces, hospitals, stadiums, museums and tourist attractions.

Our E-Pantry smart fridges:

## **Are easily placed in multiple locations on a site**

## **Have a premium look and feel**

## **Are 100% theft-proof**

The E-pantry smart fridges have been designed in a range of options to suit your location and your customers. The fridges offer the capacity of 1-3 traditional vending machines in the footprint of just 1-2 fridges and are available as single or double door options.

With the option to add a microwave, self-contained refuse points and one of five styles of coffee machine, our smart fridges can be set up in bespoke housings to suit the unique needs and configuration of each location. Our entry option is the Wall suitable for serving customers up to 150 daily. Our second option is the Mini providing services up to 300 customers. Our final option is the Full with a potential 300+ customers daily.

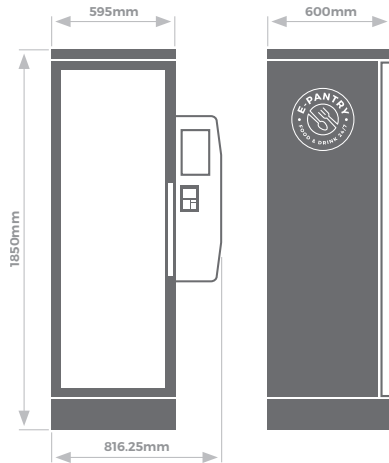

### **The E-Pantry smart fridge customer journey**

1. Customer scans the QR code on the machine using their mobile phone.
2. Once the code is scanned the fridge is unlocked and the customer is free to shop or the items they want.
3. When an item is removed from the shelves, the fridge automatically adds the item to the basket.
4. If the customer does not want the item, they simply put it back on the shelf and the item is deducted from the basket.
5. Once all the items have been chosen, they close the fridge door and select to conclude the transaction on the fridge screen.
6. Payment can be made using the purchase option on the app or the fridge screen. The smart fridges accept payment through:
  - VISA and Mastercard (No pre-registration needed)
  - Samsung Pay
  - Google Pay
  - Apple Pay
  - Breaz (Elior's all-in-one, modular digital app platform)
