

# SELF SERVICE HOT LOCKERS

Temperature controlled self-serve lockers allow customers to choose & purchase their meal, then consume immediately

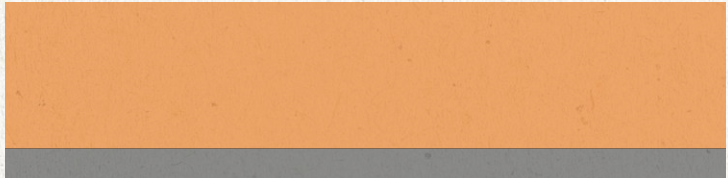

Freshly prepared hot food ready to go 24/7

The locker automatically opens with a flashing light to indicate where to collect your items.

Precision scales are used to detect the quantity of products taken and charges the customer accordingly.

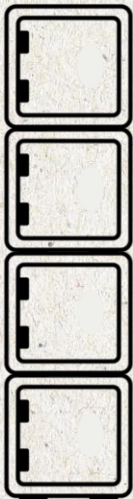

- **Always Available - What It Should Be - Simple**
  - Our hot pods help navigate businesses with concerns over queuing at peak times by supporting the main areas.
  - Pods can provide a food service solution when a full service restaurant is not financially viable or practical.
  - These computer controlled units can ensure the food is available for up to 4 hours once placed into the pod
  - Additional pods can be added easily should footfall increase.
  - Due to the technical build, these units only require two 13amp sockets and a Wi-Fi or ethernet connection

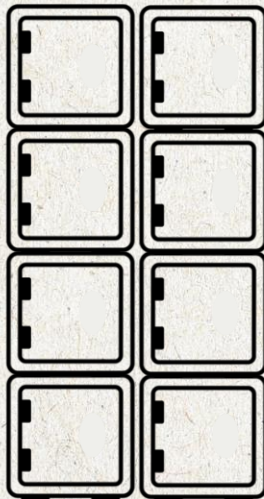

- **Clever technology ensures perfect food every time**
  - The computer system is loaded with the menus and their ingredient build. This allows each locker to retain or vent steam to maximise the products quality for the period it is in the locker.
  - Should a locker lose temperature or raise a fault, doors are automatically locked and message sent to manager to remove food safety risks

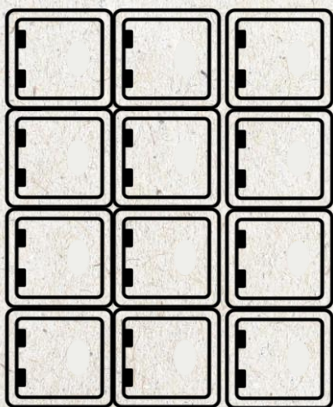

Code:  
POD01 (4 Block)  
80 meals

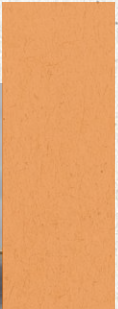

Code:  
POD02 (8 Block)  
160 meals

- **Size to suit any operation**
  - To ensure capacity our lockers come in stacks of 4. Each locker can hold up to 20 single meals providing 80 meals at any one time.
  - Lockers can be used for different day parts to maximise the investment.
  - Dedicated back of house operating system allows the user to manage food safety, menu management, tariff, wastage, sales and all other control settings via the cloud.
  - Hot lockers work well in combination with smart fridges and digital hot and cold beverage machines. For more details please contact the operational team as detailed on the back.

Code:  
POD03 (12 Block)  
240 meals
